

# ReadyToProcess™ Single-Use Products

MADE IN CHINA

ReadyCircuit™ assemblies are part of the ReadyToProcess™ product platform of single-use components. Configure an assembly to meet specific needs by simply connecting 2D or 3D ReadyCircuit™ bags to other ReadyToProcess™ consumables such as filters (Fig 1). ReadyCircuit™ assemblies bring simplicity and speed to bioprocessing, thus enabling biopharmaceutical companies, contract manufacturing organizations (CMOs), and biotech start-ups to accelerate product development and reduce costs of initial investments. In addition, single-use ReadyCircuit™ assemblies can help reduce production batch change-over time, as well as costs for cleaning and cleaning validation. Since November 2018, Cytiva has collaborated with a Chinese healthcare technology supplier, Wego Pharmaceutical, to produce single-use products in China to supply customers throughout Asia Pacific. These products are manufactured according to Cytiva's global quality standards.

## ReadyCircuit™ bags and tubing assemblies deliver:

- Quick configuration and assembly of a wide range of sterile, fluid-processing circuits.
- Flexibility of single-use technology.
- Elimination of cleaning and cleaning validation.
- Possibility to develop products without large capital investments in manufacturing systems.

## Advantages for your application

ReadyCircuit™ assemblies offer distinct advantages in many applications such as aseptic clarification and purification of vaccines, monoclonal antibodies, recombinant proteins, and plasmids, aseptic cell processing, operations in environments where terminal sterilization is not feasible, production for preclinical to commercial, processing in areas where the risk of cross-contamination is high, and Fast Track drug development processes.

**Fig 1.** Typical ReadyCircuit™ assembly with ReadyToProcess™ filters, ReadyMate™ Disposable Aseptic Connectors (DAC), and tubing.

## Product configurations

Scale-up capability is offered by ReadyCircuit™ bags, for continuity in your development efforts. Bag types include:

- Sample bags (50 and 250 mL) for small-volume applications.
- Horizontal pillow bag (50 L).
- 2D pillow bags (1, 5, 10, and 20 L) for vertical or horizontal use on mobile carts (Fig 2).
- 3D bags (50, 100, 200, 500, and 1000 L) for large-scale production.

ReadyCircuit™ bags have inlet and outlet ports and are supplied sterile with ReadyMate™ connectors, AseptiQuik™ G connectors, or seal ended. Port configuration varies with bag type. 3D storage bags can be transported in ReadyToProcess™ XL bins (Fig 3) and foldable bins (Fig 4).

The foldable bins have a unique design that lets you fold the bin parts when you are working with bags. Moreover, you can stack bins after they are folded. You can save 40% to 52% storage space in your warehouse for each bin.

**Fig 2.** ReadyToProcess™ single-use 2D storage bag, 250 mL .

**Fig 3.** ReadyToProcess™ XL bins for 3D storage bags. From left to right: 500 L, 200 L, and 100 L bins. 1000 L bin not shown.

**Fig 4.** Foldable 500 L/1000 L bin for 3D storage bags.

## Fortem™ film

ReadyToProcess™ bags manufactured in China include Fortem™ film. Development with Sealed Air Corporation enabled us to apply the full range of both companies' expertise in material science to define and optimize the critical quality attributes of this single-use platform bioprocess film. Fortem™ film is exceptionally well characterized, with specific analytical work done to identify and control degradative products. It has been developed in accordance with the latest industry guidance, in particular the BioPhorum Operations Group (BPOG) extractables testing protocol. It has also been qualified extensively using new methodologies for film failure, including demanding tests for flexural fatigue, weldability, and abrasion resistance. The film's architecture is comprised of a nylon outer layer that resists damage throughout the many rigors of bioprocessing conditions (Fig 5). It contains two internal gas barrier layers for maintaining pH stability during liquid storage and transportation and provides a controlled environment for cell culture applications. The contact layer is composed of linear low-density polyethylene (LLDPE) with a low extractables profile and strong weldability characteristics. The result is one film that is designed specifically for bioprocessing requirements to deliver consistent performance from beginning to end.

The 10-layer film is 330 µm thick, with an outer layer of nylon, a double ethylene vinyl alcohol gas barrier, double polyethylene interior layer, and contact layer of LLDPE.

**Fig 5.** Ten-layer structure of Fortem™ film.

## Tube assemblies

Basic tube assemblies consist of lengths of tubing with ReadyMate™ DAC at each end. Other ReadyCircuit™ tube assemblies include tubing or aseptic connectors integrated with components such as tees, pressure sensors, reducers, and more.

You can select and order a combination of ReadyCircuit™ tube assemblies that meet your specific binic processing needs (Fig 6). Or you can order preconfigured kits consisting of tube assemblies, bags, and sensors that will help you meet many standard fluid processing objectives.

Some circuits and assemblies include TC and Steam-Thru™ adapters commonly used to connect disposable fluid paths to stainless steel process equipment.

**Fig 6.** Tube assembly using ReadyMate™ DAC.

## ReadyCircuit™ custom platform

The ReadyCircuit™ custom platform offers variety of design to meet your needs: Choose from different bags, tubings, connectors, and sensors.

The custom platform not only helps you define the unique design, but also provides budgetary quotations, drawings, bill of materials, and prototype samples if needed.

## Ease of use

Most ReadyCircuit™ assemblies use ReadyMate™ connectors. These connectors enable you to make aseptic system connections in a matter of seconds. The genderless design facilitates connection, reduces complexity of inventory, and creates flexibility in the assembly of single-use flow paths. Features include:

- **Genderless.** Mates without adapters and reduces inventory.
- **Simple.** No special tools or training are required for aseptic connection in less than 60 seconds.
- **Self-contained.** Single-use aseptic connections are easily made in nonhooded environments.
- **Robust.** Fits sanitary clamps for permanent, high-pressure applications; gamma stable.

## Specifications

Specifications for ReadyCircuit™ products made in China are listed in Table 1.

**Table 1.** General specifications for ReadyCircuit™ assemblies

Operation temperature	Processing temperature (liquid temperature) = 2°C to 45°C Operating temperature (ambient temperature) = 2°C to 45°C
Storage temperature	Storage of unfilled products (All Bag Assemblies) Temperature = Ambient Storage of 2-D bags filled with process fluids: Temperature = -80°C to 45°C Storage of 3-D bags filled with process fluids: Temperature = 2°C to 45°C
Material conformity	All polymeric materials in contact with process fluid • USP <88> Class VI, Biological reactivity, <i>in Vivo</i> • USP <87> Biological reactivity, <i>in Vitro</i> • ISO 10993-4: Selection of tests for interaction with blood • Animal free or in compliance with EMA/410/01 Rev. 3
Sterility	Validated sterile fluid path at an SAL of 10 <sup>-6</sup> according to ISO/TS 13004 and the principles of ISO 11137-2
Endotoxin	< 0.125 EU/mL endotoxin as determined by the LAL test, daily process sample tested USP <85> Bacterial Endotoxins
Particulate Matter	Fluid path rinses meet the current limits of USP <788> Particulate Matter in Injections, daily process sample

**Table 2.** Maximum working pressures for the three types of tubing found in ReadyCircuit™ components

C-Flex®	1 bar (15 psi) at 20°C
Reinforced silicone (AdvantaPure™)	4 bar (60 psi) at 20°C
Pump tubing (Pumpsil™)	
6.3 to 9.1 mm (1/4 to 3/8 in)	1.7 barg (25 psig) at 20°C
12.7 to 19 mm (1/2 to 3/4 in)	1 barg (15 psig) at 20°C

**Table 3.** Shelf life

Bag assemblies (2-D and 3-D, unfilled) at ambient temperature	2 years
50 mL sample bag (unfilled) at ambient temperature	3 years
Jumper tubing assemblies at ambient temperature	Jumpers with RS tubing: 12 months Jumpers with C-Flex® or Pumpsil™ tubing: 18 months

## ReadyToProcess™ XL bin

Product	Description	Product code
ReadyToProcess™ BIN-100	100 L standard bin including casters and drain plate	29384060
ReadyToProcess™ BIN-200	200 L standard bin including casters and drain plate	29384061
ReadyToProcess™ BIN-500	500 L standard bin including casters, drain plate and removable door	29384063
ReadyToProcess™ BIN-1000	1000 L standard bin including casters, drain plate and removable door	29384064

## ReadyToProcess™ foldable bin

Product	Description	Product code
Foldable BIN-500/1000	500L/1000L stainless steel dolly	29615909
	Foldable bin, 500L/1000L	29615904
	500L insert	29615906
Foldable BIN-100/200	100L/200L stainless steel dolly	29615910
	Foldable bin, 100L/200L	29615905
	100L/200L insert	29615907
